Security Readiness Scorecard

This scorecard summarises the answers given in the self-assessment. Each area is scored from 0 to 100 using the rules defined in the assessment configuration, with a recommended next step for each.

64
out of 100

Moderate risk

The foundations are in place, but there are gaps that are worth closing before they are tested by an incident.

Prepared for **Elena Ivanova**, Ivanova Consulting · 10 of 11 scored questions answered

CATEGORY	SCORE	RECOMMENDATION
Accounts & Access Who can sign in to what, and how well those accounts are protected.	87	**Well protected:** Review access quarterly and remove accounts on the same day someone leaves.
Data Protection Backups and how sensitive information is stored and shared.	78	**Moderate risk:** Test restores on a schedule and move sensitive files out of personal accounts.
Devices & Updates Keeping laptops, phones and software patched and protected.	50	**High risk:** Enable automatic updates on every device and remove software that is no longer supported.
Incident Readiness Knowing what to do when something goes wrong.	25	**High risk:** Write a one-page plan: who to call, how to lock accounts, and where backups live.

RESPONSES

Accounts & Access	Is multi-factor authentication enabled for email and admin accounts?	**Yes**
Accounts & Access	Do people share logins for business tools?	**No**
Accounts & Access	How consistently does the team use a password manager?	**4 / 5**
Accounts & Access	When someone leaves, how quickly is their access removed?	**Within a week**
